Use outdoors during the growing season or indoors any time. Costly Rhododendrons, Azaleas, Roses, trees or any hardwood plant can be induced to form roots on a selected stem by the Airwrap method which inexperienced gardeners can use. Once rooted the stem can be cut off and planted. Airwrap plastic film is wrapped around a ball of sphagnum moss, surrounding a wound which is prepared with a knife, according to directions. The moss is saturated and the film holds the moisture in, while allowing air to penetrate freely. The film contains necessary growth and rooting chemicals. One kit will make eight new plants. Complete directions with every kit. Each \$1.95 at store, post-paid \$2.15.

Holmes' SUPERIOR SEED CORN

Wonder 255

Here is indeed a wonderful Corn. We think it is the grandest corn ever produced. Big ears, long, 18 to 22 rows of deep grain. The foliage is **very dark green**, and retains this color when the ears ripen. As to heat and drought resistance, it is not surpassed by any other. It's borer resistant. Its strong stalk and good roots make it stand best of all. It is adapted to a wide range of soils from poor to high and for northern states where yields have been consistently very high. Matures medium early, 100 days. We highly recommend that you grow a crop of this our **Wonder 255. Large flat kernels.**

Bu., \$12.00; 2 bus., \$23.50

HOLMES' EARLY 90-DAY. Here is a Corn we can very highly recommend. The ears average 12 inches long. The Corn is a very bright golden yellow color. Grains deep and broad. Its cob is thin and the fodder averages 10 ft., with two fine ears on many stalks. It is an early Corn maturing in 90 days with normal growing weather. Our seed crop is extra fine.
